

**NOTE: Please review the below copyright agreement as you must acknowledge your approval online prior to submitting your paper.**

**ENVIRONMENTAL AND ENGINEERING GEOPHYSICAL SOCIETY COPYRIGHT AND PUBLISHING AGREEMENT**

The Environmental and Engineering Geophysical Society (EEGS) is pleased to accept for publication your article (hereinafter "the Article"). We look forward to working with you to prepare the Article for publication.

The publishing industry has grown increasingly complex in recent years, particularly with the expansion of new technologies for the delivery of information. In order to better manage the rights associated with your Article, and to provide optimal access to it, we believe you and all coauthors, the Author(s), should hold the copyright to your Article, but that you should grant us, EEGS, appropriate rights to use your Article for the benefit of the geophysics community. We believe that this arrangement will properly serve our shared interest in reaching the largest readership possible. We also believe that by securing certain rights to the Article, we will be better able to disseminate your Article through print, electronic, and digital media, and by other means that will exist in the years to come.

To that end, you, with the consent of all authors, and EEGS agree as follows:

1. The Author(s) (or the commissioning organization or employer if the Article is a "work made for hire") shall retain the copyright and all other literary rights in and to the Article. This Agreement shall in no way limit your right to:
  - a. Reproduce, distribute, display, and transmit copies of the Article for your own personal, professional, or educational purposes, provided that each copy includes appropriate credit to EEGS as the original published source of the Article.
  - b. Publish all or part of the Article in subsequent works of your own, such as a new article on the same subject or a book of which you are an author, provided that you credit EEGS as the original published source of the relevant material.

For a period of one year after the date of first publication by EEGS, any publication of the article in a collective work prepared by others shall require our permission.

2. The Author(s) represent and warrant that the Article is your original work, that you (or the commissioning organization or employer if the Article is a "work made for hire") own the copyright in its entirety, that it contains no material that infringes the copyright of any other person, that it has not been published

previously, and that you have the full power and authority to enter into and perform this Agreement. If the Article is a "work made for hire", an authorized representative of the commissioning organization or employer should accept the terms of this agreement.

If the Article has been prepared by a U.S. Government employee as part of his/her official duties, it is not subject to copyright. If at least one of the authors is not a U.S. Government employee, that author should check the box indicating he/she accepts the terms of this agreement. If all of the authors are U.S. Government employees, please indicate this by checking the appropriate box.

3. EEGS shall publish your Article in accordance with its customary publication schedule, policies, and formats as they may exist from time to time, including without limitation print and electronic versions of the Proceedings of the Symposium on the Application of Geophysics to Engineering and Environmental Problems (SAGEEP).
4. Although the Author(s) will remain the copyright owner, the Author(s) grant to EEGS the irrevocable, nonexclusive rights to:
  - a. Reproduce, publicly distribute and display, and transmit the Article or portions thereof in any manner, including but not limited to conference proceedings, newsletters, as part of collective works, as reprints, and through any medium now in existence or developed in the future including but not limited to print, electronic and digital media, computerized retrieval systems, and other formats. EEGS may exercise these rights directly or by means of third-party information providers.
  - b. Grant permission to third parties to reproduce and distribute the Article for educational or research uses, provided that EEGS requests of the third party that: (i) the author and EEGS are identified on each copy; and (ii) proper notice of copyright is affixed to each copy.
  - c. The Author(s) grant the above rights without claim of royalties or other compensation.
5. In support of higher education, we currently use our best efforts to include a notice that is substantially as follows:

Copyright 2009, The Environmental and Engineering Geophysical Society (EEGS). Except as may be expressly provided elsewhere in this publication, permission is hereby granted to reproduce and distribute copies of individual works from this publication for research, library, and nonprofit educational purposes, provided that (i) copies are distributed at or below cost; (ii) the author and EEGS are identified, and (iii) proper notice of copyright is affixed to each copy. This permission is in addition to rights of reproduction granted under Sections 107, 108, and other provisions of the U.S. Copyright Act.

Due to changing circumstances in the publishing industry and in copyright law, we must reserve the right to revise or delete this notice on future publications that include your Article. This copyright notice in the name of EEGS on the proceedings does not preclude your adding a copyright notice to your individual Article. Document Revised: September, 2009.
