ParkSEIS® (PS) for MASW Data Analysis

ParkSEIS® (PS) presents the most up-to-date algorithms in the development of MASW method to ensure the most accurate analysis results. It provides the most comprehensive tools to process data acquired through active, passive, and active/passive combined MASW surveys for:

- shear-wave velocity (Vs) profiles (1-D, 2-D, and depth slice)
- back scattering analysis (BSA) for anomaly detection (voids, tunnels, boulders, weak zones, etc.)
- common-offset sections for quick evaluation of subsurface conditions
- modeling MASW seismic records and dispersion curves

ParkSEIS® (PS) has been rigorously tested by processing data sets from hundreds of different sites under Windows XP, Vista, 7, and 8 operating systems with a minimum 1GB memory. It is available for purchase or lease. Visit www.parkseismic.com for more information or contact parkseis@parkseismic.com

Geode EM3D
Full Tensor 2-D and 3-D Exploration CSAMT

- More detailed information of your prospect
- Distributed network of up to 240 electric and magnetic sensors
- Save time and money
- Over 100 simultaneous CSAMT soundings with a single transmitter acquisition run
- More precise site characterization – Highest resolution EM resistivity mapping
- Reliable Ethernet communications – no GPS outages, no lost satellites, no line-of-sight communication failures

POLARES 2.0
Automated Electrical Resistivity Tomography in A.C.

New Features:
- 200W - 2A - 700Vpp
- up to 40000 measures for single reading
- up to 6 measures/sec

- unlimited electrodes
- ideal also for 3D surveys
- accessories for VES and any ABMN configuration
